

ANTIFOAM QN-10

Antifoam QN-10 is an emulsion foam control agent designed to deliver effective control of foam. The product is developed to get effective foam control in paper and pulp processing applications.

Chemical Properties:

Antifoam QN-10 is a silicone based antifoaming agent with good emulsifying system.

Physical Properties:

Appearance	White Emulsion
Ionic Character	Non ionic
PH	8~ 8.5
Viscosity	2000 ~ 5000

Typical Applications:

- Paper processing
- Waste water treatment
- Aqueous Inks and Coatings
- Adhesives & Glues
- Emulsion Polymerization

Antifoam QN-10 can do well at moderate temperatures and it withstand mechanical processing; starting dosage will be 0.3 to 0.6 % of the formula weight.

Please stir well before use.

Keep @ temperature max. 40°C
