

## ANTIFOAM QN20

**Antifoam QN20** is an emulsion foam control agent designed to deliver effective control of foam. The product is specially developed to get effective foam control in paper and pulp processing.

### Chemical Properties:

**Antifoam QN20** is a silicone based antifoaming agent with an emulsifying system.

### Physical Properties:

Appearance	White Emulsion
Active Content, %	20
Ionic Character	Non ionic
PH	8~ 8.5
Viscosity	2000 ~ 5000

### Typical Applications:

- Paper processing
- Waste water treatment
- Aqueous Inks and Coatings
- Adhesives & Glues
- Emulsion Polymerization

Antifoam QN20 can do well at moderate temperatures and it withstand mechanical processing; starting dosage will be 0.3 to 0.5% of the formula weight.

**Please stir well before use.**

**Keep @ temperature max. 40°C**
