

LAVAL CSR CONC

Laval CSR CONC is anionic wetting agent and detergent to give excellent combination of wetting out, detergent and emulsification with low foam .

Appearance : pale yellow liquid
Ionic Activity : Anionic
pH : 6- 7

Chemical Composition

Is a blend of anionic wetting agent and detergents based on sulfate derivatives technology .

General properties :

- 1 - Possesses a complete spread of wetting out, detergency and emulsification properties due to its unique chemical nature .
- 2 - Is stable to high levels of caustic soda , soda ash, etc. enabling use in both scouring and bleaching of cotton blended fabrics .
- 3 - Gives excellent removal of impurities, e.g. cotton wax, leaving a highly absorbent substrate to subsequent dyeing or end use e.g. toweling .
- 4 - Is extremely low foaming and hence is ideal for use in jet dyeing machines.
- 5 - Can be used for washing off reactive dyes .
- 6 - It easily rinsed from the fibre surface leaving exceptionally low residual surfactant levels .

Application

It can be used for textiles made from cellulose and synthetic fibres .

The level of application is between 0.5-3 gm/l. With X g/l caustic soda or soda ash

Please stir well before use.
