

## PRODUCT BT

**PRODUCT - BT** is a mixture of anionic wetting and dispersing compounds developed with special organic sequestering agent. It is used for dyeing cellulose fibers with reactive and direct dyestuffs.

### GENERAL PROPERTIES

<b>Appearance</b>	: Brown liquid.
<b>Ionicity</b>	: Anionic
<b>pH</b>	: 5 -7
<b>Dissolving</b>	: With cold or warm water
<b>Stability</b>	: Resistant to alkalis and electrolytes
<b>Compatibility</b>	: Good compatible with anionic and nonionic products

### SPECIAL PROPERTIES

**PRODUCT- BT** has good wetting properties, which enhance the penetration of dyestuff liquor in the fiber . It has also the power to dissolve and disperse impurities in the fiber, with high stability of the dye liquor

### APPLICATION

**PRODUCT -BT** is suitable for use in both exhaust and pad processes.

#### Exhaust Process: 1 - 3 g / 1

where add half of the quantity to the water used to dissolve the dyestuff and the other half added directly to the dye bath .

#### Pad process: 3 -6 g / 1

Where the product should be added with the water used to dissolve the dyestuff or directly to the padding liquor.

**Please stir well before use**
