

## PRODUCT - HT

**PRODUCT - HT** is a mixture of anionic wetting, levelling and dispersing compounds developed with special organic sequestering agent. It is used for dyeing cellulose fibers with reactive, sulphur and direct dyestuffs .

### GENERAL PROPERTIES

<b>Appearance</b>	: Yellow brown liquid.
<b>Ionicity</b>	: Anionic.
<b>pH</b>	: 5 -7
<b>Dissolving</b>	: With cold or warm water.
<b>Stability</b>	: Resistant to alkalis and electrolytes.
<b>Compatibility</b>	: Good with anionic and nonionic products.

### SPECIAL PROPERTIES

**PRODUCT- HT** has a good wetting and leveling properties, which enhance the penetration of dyestuff liquor in the fiber . It has also the power to dissolve and disperse impurities in the fiber, with high stability of the dye liquor.

### APPLICATION

**PRODUCT -HT** is suitable for use in both exhaust and pad processes.

**Exhaust process:** 1 - 3 g / L

where add half of the quantity to the water used to dissolve the dyestuff and the other half added directly to the dye bath .

**Pad process** : 3 - 6 g / L

where the product should be added with the water used to dissolve the dyestuff or directly to the padding liquor .

**Please stir well before use.**

**Keep @ temperature max. 40°C.**
