

SUPER FIX CONC

SUPER FIX CONC is non-formaldehyde based fixing agent for direct and reactive dyes. It significantly improves both wash fastness and crock fastness of dyed cellulosic fabrics and blends.

SUPER FIX CONC improves the color fastness of direct and fiber reactive dyed

Fabrics to laundering perspiration, and water. It improves the crock fastness of fabrics dyed with direct dyes; it is highly resistant to the presence of salts such as sodium chloride or sodium sulfate and contains no formaldehyde.

SUPER FIX CONC can be effective at room temperature but optimal results occur when bath temperature is slowly elevated (6°C/min.) to 50°C deg. for 10 min.

(light to medium shades) or 15 - 20 minutes (dark shades). It can applied by the pad/dry method with satisfactory results .

General Properties

Appearance	: pale yellow liquid
Composition	: Cationic resin
pH	: 3-4
Solubility	: Soluble in cold water

Application Method

SUPER FIX CONC is applied at a concentration of 0.25 – 1% OWF. This application

level may need to be adjusted depending on depth of shade, dyestuff used, and application method .with acid medium PH = 5.5

Please stir well before use.

Keep @ temperature max. 40°C.
