

Suppressor 1425

General Purpose Antifoam/Defoamer

Suppressor 1425 is a 20% active organically-modified, silicone emulsion designed for general purpose use and offers the customer effective foam control at relatively low cost. Quick knockdown of foam and persistent foam control marks the characteristics of Suppressor 1425 in most systems. The product works equally well in hot and cold systems. The product can also be diluted to prepare 10% silicone antifoams.

Appearance	White, opaque liquid
Specific Gravity (@ 20°C)	0.993 g/ml
Flash Point	None
Solubility in water	Dispersible

Typical Applications

- Defoamer formulation
- Inks & Coatings
- Adhesives & Glues
- Emulsion polymerization

Suppressor 1425 can be used as received by metering into the foaming system or by batch addition. If dilution is required, the product should be charged to a vessel with agitation and slowly charge the required amount of water. Resulting solution should be agitated regularly to ensure uniformity and maximum effectiveness.
